## Qualità dei materiali

Saune e Hammam subiscono enormi sollecitazioni termiche, per questo i materiali che li compongono sono un fattore determinante di qualità.

Dall'Hemlock Canadese al tradizionale Abete di Svezia, più di 10 tipologie di legno esclusivamente di prima scelta, selezionate e sottoposte a rigorosi controlli di qualità, rappresentano una vasta gamma di soluzioni estetiche delle saune Effegibi.

Legni naturali ecocompatibili, che non provengono da deforestazione o da alberi in estinzione, garantiscono un ambiente sano che resta a lungo inalterato.

Per gli Hammam, Effegibi ha selezionato le migliori ceramiche, i marmi e speciali materiali composti con le ultime tecnologie, piacevoli al tatto e capaci di dare un tocco unico all'ambiente.

## The quality of our materials

Saunas and Hammams are subjected to massive thermal stress, this is why the materials they are made of play such an important role in their quality.

Our saunas are constructed from over 10 different types of wood, from Canadian hemlock to the traditional Swedish pine, all painstakingly selected and rigorously quality controlled to provide a vast range of aesthetic solutions. Eco-friendly natural wood, which does not come from deforestation or trees in danger of extinction, guarantees a healthy environment which retains all its characteristics over time.

For its Hammams, Effegibi has selected the best ceramics, marbles and special materials produced using the latest technologies which are pleasant to the touch and give their surroundings a highly original look.
